intuit enterprise suite

Product release overview

Fall 2026

What's new in Intuit Enterprise Suite

Complex businesses can't run with blind spots: inventory stuck in spreadsheets, currency conversions missing the right controls, or margin erosion that surfaces too late to act on. The Fall release addresses those blind spots in a big way. Inventory management now runs natively inside Intuit Enterprise Suite, from the moment goods are received to the moment they ship, replacing manual reconciliation with accuracy and traceability built directly into your books. Multi-currency, introduced this Summer, gains the controls and coverage finance teams asked for, and we're introducing Intuit Enterprise Suite for Construction with new capabilities spanning billing, retainage, and WIP reporting.

These updates, and many more, were shaped directly by Intuit Enterprise Suite customers and partners, built around what it actually takes to run and grow your business or firm.

These notes include beta features rolling out between November and February. As features graduate from beta to becoming generally available (GA), we will include them again in our release notes labeled 'Now GA'. Join our **Early Access Program** to use these capabilities and help shape where they go next.

RELEASE HIGHLIGHTS

Inventory Management

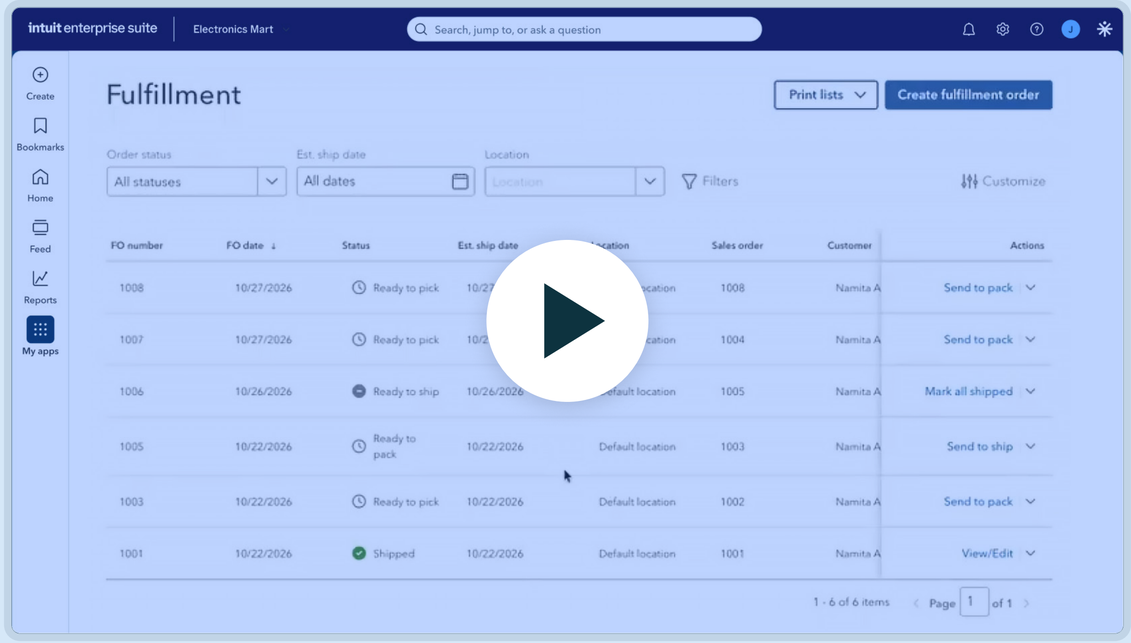

Inventory management in Intuit Enterprise Suite is now generally available. No more managing it in a separate tool and reconciling the numbers back to your books by hand. From the moment a shipment lands to the moment it ships, every unit is accurately costed, fully traceable, and connected directly to your financials. If you've been waiting for Intuit Enterprise Suite to truly handle inventory, your wait is over.

RELEASE HIGHLIGHT INVENTORY MANAGEMENT

Pick, Pack & Ship

Intuit Enterprise Suite now has a native fulfillment workflow connecting your Sales Orders directly to the warehouse floor. A manager dashboard shows every open order and whether it's fulfillable, lets you assign pickers and packers, and tracks status in real time instead of paper lists and verbal handoffs. Workers get a dedicated mobile view to pick and pack from their own assigned orders, flag short picks on the spot, and move orders forward automatically. When it's time to ship, buy and print a carrier label without leaving the workflow, with tracking populating back onto the order automatically.

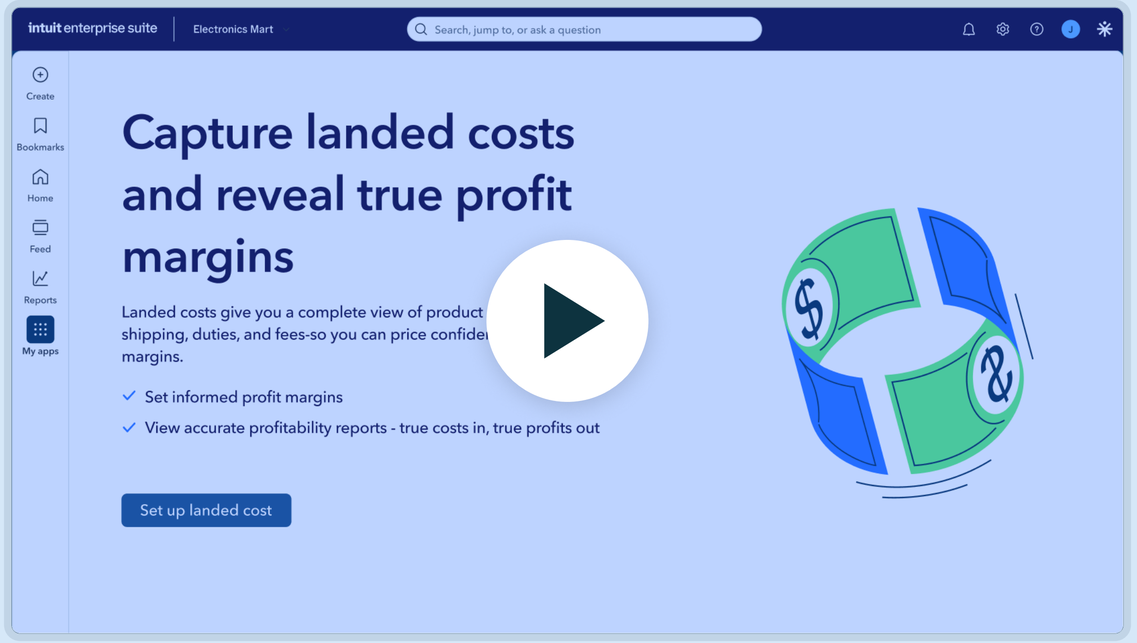

Inventory tracking: Order fulfillment (4:50)

> "For a manufacturing business, we got everything set up in Intuit Enterprise Suite the way we need it. And everything's working exactly like we need it to...In our experience, the new build system in Intuit Enterprise Suite works even better than the Advanced Inventory feature in the old QuickBooks Enterprise Desktop version. It's a significant improvement for our business, and we're glad to see Intuit bringing these capabilities directly into [Intuit Enterprise Suite]."
>
> Russ Burraston, Founder and COO, Silver Fern

RELEASE HIGHLIGHT INVENTORY MANAGEMENT

Receiving & Costing

Receiving inventory now reflects what actually happened, not just the stock itself. Item Receipt recognizes non-inventory items and services alongside inventory, so a shipment that includes freight or a non-stocked item can be received in full on one receipt, and the purchase order closes correctly. When freight, customs, or handling charges are billed separately, Landed Cost folds them directly into what the item actually cost you, keeping margins accurate instead of overstated. And when on-hand inventory value needs correcting after the fact, a new value adjustment type lets you fix the dollar value directly, recalculating average cost per unit automatically, with the option to tag the adjustment to a project so it rolls up into project cost reporting.

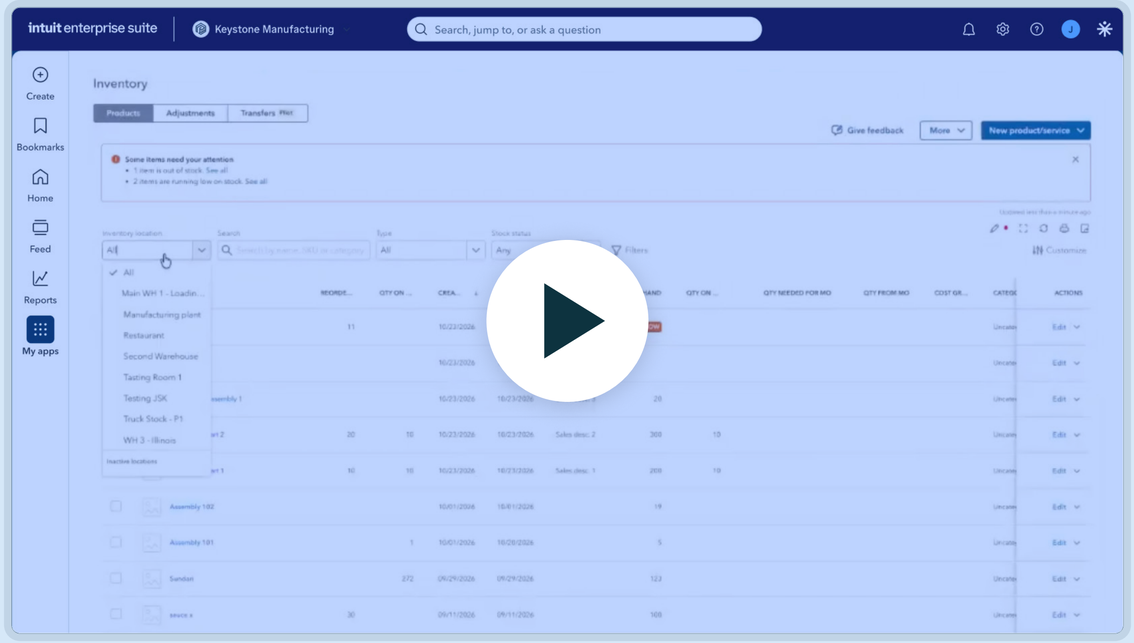

Inventory tracking: receiving and costing (13:51)

RELEASE HIGHLIGHT INVENTORY MANAGEMENT

Multi-Location Inventory Management

Track exactly how much of an item you have at each physical site, down to two levels: a location and, optionally, sub-locations within it. This includes full location support across nearly every transaction type, inventory transfers between locations, an inactivate and reactivate lifecycle for locations, per-location reorder points, and new location-aware reporting.

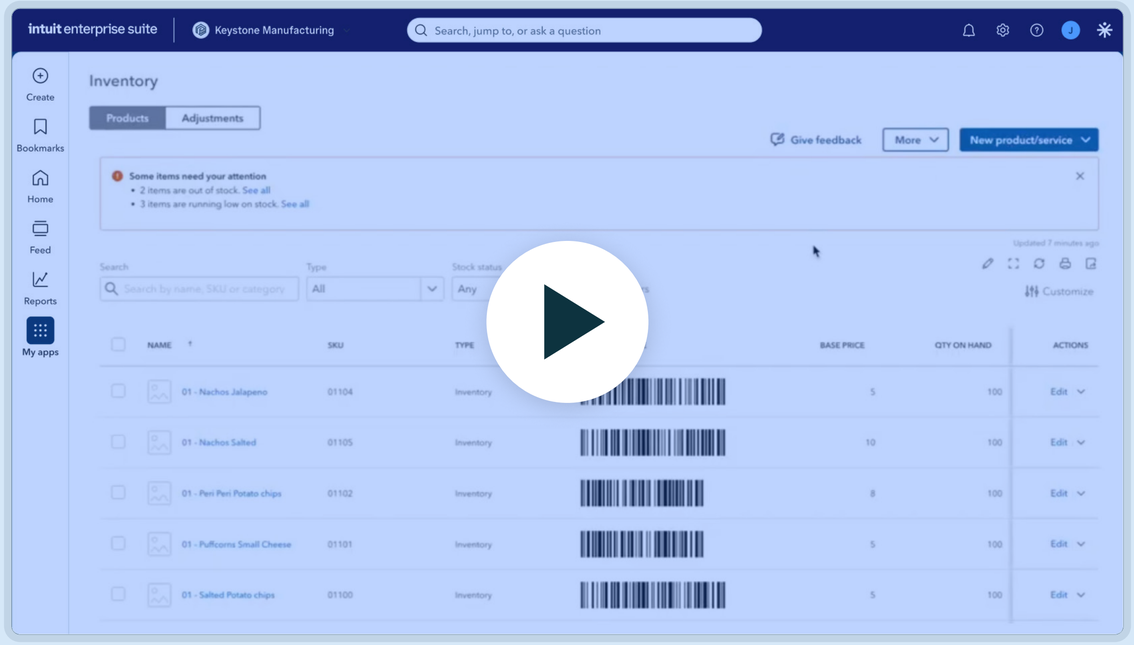

Inventory tracking: Manage inventory across multiple locations and sub-locations (11:03)

RELEASE HIGHLIGHT INVENTORY MANAGEMENT

Traceability

Track every item from the moment it's received to the moment it ships. Serial numbers now get the same tracking capabilities lots already had, you can require a lot or serial number on every relevant transaction company wide, and your own numbering format shows up correctly on packing slips and pick lists. Barcode scanning ties it all together: assign a barcode to each item, then scan it with any USB or Bluetooth scanner to fill in item, quantity, lot, and serial details automatically, on receipts, bills, purchase orders, sales orders, counts, adjustments, and picking. You can even print the barcode labels yourself, no third party software needed.

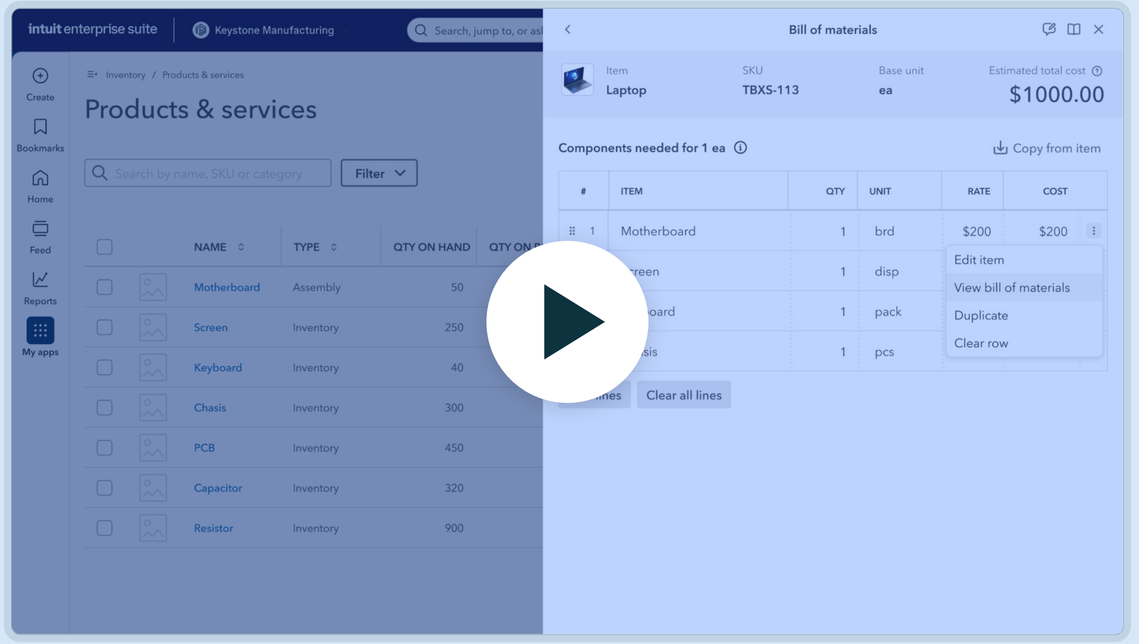

Inventory tracking: Barcode scanning and label printing (2:35)

RELEASE HIGHLIGHT INVENTORY MANAGEMENT

Multi-level Bills of Materials & Assemblies

Build products from other items with multi-level bills of materials and production orders built directly into Intuit Enterprise Suite. Define product recipes, track production with real-time shortage visibility across sub-assemblies, capture the materials and labor actually used, and generate the final inventory and cost accounting entries automatically upon completion, all in one connected workflow.

Manufacturing: use Intuit Enterprise Suite for multi-level bills of materials and assemblies (2:02)

RELEASE HIGHLIGHT INVENTORY MANAGEMENT

Sales Order Enhancements

Sales Orders now support customer deposits and multiple shipping addresses. Record a deposit directly on a Sales Order, and it flows automatically into the resulting invoice as a reduction to the balance due. When a customer has multiple ship-to addresses on file, choose the right one directly on the Sales Order, the same way you already can on an invoice.

RELEASE HIGHLIGHT INVENTORY MANAGEMENT

Inventory Reports & Permissions

Your Inventory Status Report can now group by preferred vendor with subtotals, so you can see what to reorder and from whom in one screen, alongside two new reports (Inventory Aging Summary and Inventory Aging Detail) showing how long on hand inventory has been sitting and how much capital is tied up in aged stock down to the individual purchase lot. A rebuilt Inventory Operations Manager role rounds this out, with the reports the job actually requires and granular controls to grant full or view-only access to individual inventory features, so you can delegate inventory work precisely without opening up financial data that role never needed.

RELEASE HIGHLIGHTS BETA

Intuit Enterprise Suite for Construction

For too long, construction companies have had to build schedules of value offline, stitch those into compliant pay applications by hand, manually track and withhold retainage, and chase down project managers every month just to close out WIP. Those days are behind us with Intuit Enterprise Suite for Construction. While we have shipped a lot of new project capabilities that help many job-based industries over the last year, this is the first release with a solution purpose built for construction. Together, these new capabilities create an end-to-end solution designed to streamline the workflows general and subcontractors manage today.

- Schedule of Values (SOV) >
- Pay Applications >
- Retainage >

*Intuit Enterprise Suite for Construction will be available as a separate add-on from Intuit Enterprise Suite. Contact your Account Executive for more details.

RELEASE HIGHLIGHT BETA CONSTRUCTION

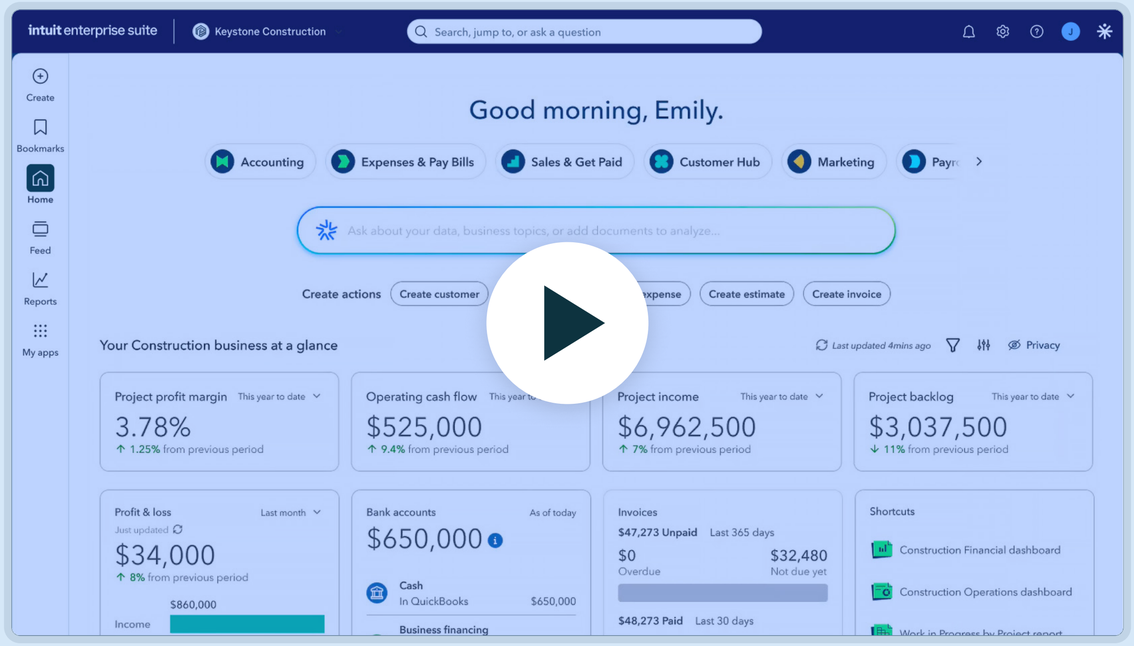

Schedule of Values (SOV)

Schedule of Values brings the industry-standard construction billing structure natively into Intuit Enterprise Suite. Build each contract's scheduled work items directly on the project, bill progressively against them, and flow change orders into the contract as they're approved. Every billing period is preserved as its own read-only version, so you have a clear record of how the contract evolved, and you can even start a project budget from the SOV using the contract value and target margin as foundation. The result: your contract, your billing, and your books stay connected on one platform.

RELEASE HIGHLIGHT BETA CONSTRUCTION

Pay Applications

General contractors can now create Pay Applications (PayApps) directly from project billing progress. The system brings together the period's invoices, G702/G703-style documentation, and supporting documents like lien waivers and certificates of insurance into a single payment package. Clients get a professional payment request by email with everything they need to review and pay, and every application stays tied to the underlying invoices so billing remains aligned. A read-only history keeps a record of every application sent, its billing period, retainage, and status.

Intuit Enterprise Suite for Construction (3:10)

This demo presents the broad range of financial workflows Intuit Enterprise Suite supports for construction businesses. The four features highlighted in these release notes — retainage, Schedule of Values, Payment Applications, and the WIP Agent — are exclusive to Intuit Enterprise Suite for Construction module.

RELEASE HIGHLIGHT BETA CONSTRUCTION

Retainage

Intuit Enterprise Suite adds native retainage management on both sides of the job. Set retainage rates at the company, project, vendor, or purchase order level, and then they'll carry through to invoices and bills. You can release retainage in full or in stages as work is completed, and see exactly what's withheld, released, and still outstanding in your project views and A/R and A/P aging reports.

RELEASE HIGHLIGHT BETA

Multi-currency

Cross-border operations now come with the controls finance teams need. Multi-currency gains tighter rate governance, broader transaction support, and clearer reporting, available now in beta.

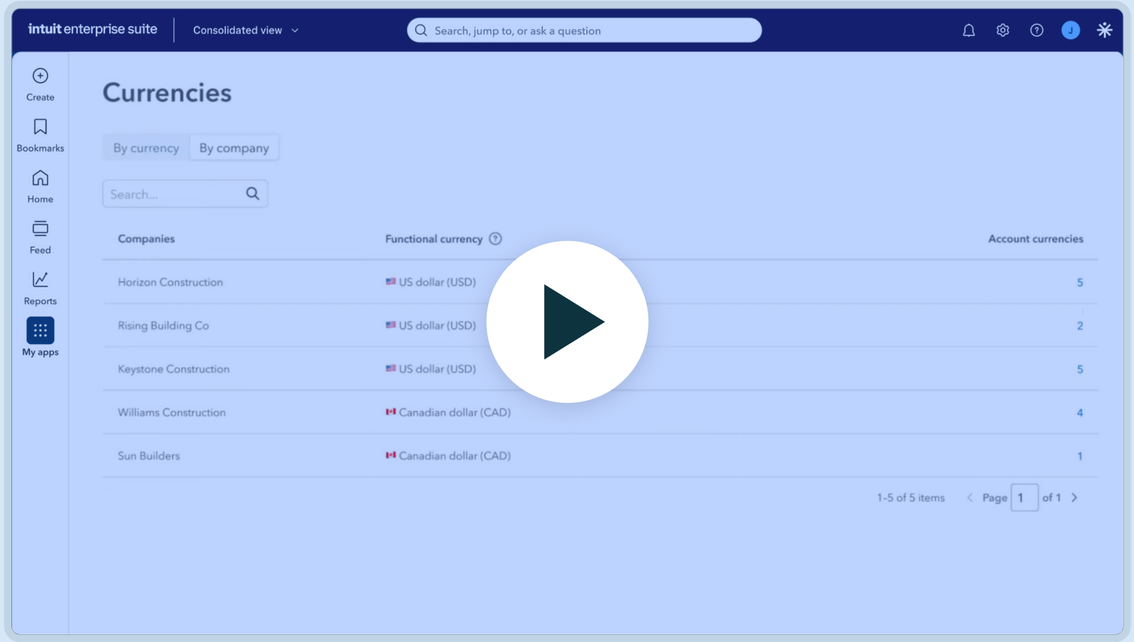

Multi-currency >

* Multi-currency is still in beta and is currently available to a limited set of customers. Eligible organizations must have US-based entities consolidating in USD only, low reliance on projects, budgets, or inventory alongside multi-currency, and do not use international payroll. Customers who meet these criteria and want access to new multi-currency capabilities should contact their Customer Success Manager.

RELEASE HIGHLIGHT BETA MULTI-CURRENCY

Multi-currency

Multi-currency now gives admins granular, role based control over who can view, create, or edit exchange rates, replacing all or nothing access with internal controls finance teams can rely on. Customers can pay down credit cards held in a foreign currency, transfer funds into a foreign bank account, and record fixed assets in the currency they were purchased in, with FX gains and losses calculated and recorded automatically. Intercompany transactions between entities with different functional currencies are now handled correctly, and more standard reports carry a remeasured tag so customers can see at a glance which ones are multi-currency aware.

Intuit Enterprise Suite Multi-currency: Fall 2026 release (6:30)

More updates

In addition to the release highlights, the Fall release gives finance leaders tighter control across the business: see every bill across every entity in one place, lock down exactly who can touch sensitive financial data, and stop losing hours to state-by-state payroll compliance.

This section highlights new features available to all Intuit Enterprise Suite customers, as well as beta features for Early Access program participants. The Early Access program lets you try new capabilities before they're widely available, help shape their direction with your feedback, and get a head start on the workflow improvements they bring. The beta features listed here will launch between November 2026 and February 2027.

Join the Early Access program here.

Dimensions

Carried-Over Dimension Assignments

Header level dimension assignments on Sales Orders now carry over automatically to the invoices created from them, so there's no need to re-assign a dimension by hand.

BETA Bulk Default Dimension Assignment

Assign default dimensions to vendors, customers, products and services, and employees all at once via spreadsheet upload, instead of setting each one individually.

Retroactive Dimension Reclassification

Already assigned a new default dimension? Use the reclassify tool to update prior transactions to match, without editing each one by hand.

NOW GA Multi-dimensional Pivots

On eligible detail reports, you can group rows and columns by multiple dimensions at the same time for deeper analysis without needing to export to spreadsheets.

Workforce

BETA Intuit Expert Workforce

A dedicated Intuit expert runs payroll on your behalf, handling pay runs, tax filings, payroll tax compliance help, and employee changes, with a redesigned hub to message your expert and approve each run yourself.

*Available for Workforce Elite customers at $600 plus $22 per employee per month

BETA Dimensions: Service Item Tagging in Payroll

Service Items, the job tags like "Framing" or "Concrete Labor" already used on invoices and timesheets, can now be assigned and edited directly within payroll. Service Items tagged on a timesheet carry through Run Payroll onto the paycheck, so labor costs land against the work performed.

BETA Compliance Training

Compliance training now lives natively in Workforce. Assign courses, track completion, and let employees complete training right from the Workforce app.

*Service provided by Easy Llama

BETA Team Surveys

Build custom team surveys on any topic directly in Workforce. Describe what you want to learn, send it to your team, and get an AI generated summary of the results automatically.

Invoicing

Invoicing Enhancements

Manage and select multiple shipping addresses directly on an invoice, group expenses together on the invoice itself, and get a new set of purchase order reports for added visibility.

Multi-entity

BETA Consolidated Bills

See every bill across every entity in one place. The consolidated bills view shows all paid and unpaid bills company wide, with KPIs for outstanding, overdue, due soon, and scheduled amounts. Filter by company, date, or intercompany versus external, then jump straight into any bill to update, pay, or schedule it.

Projects

BETA Sub-projects

Organize work as parent projects with nested sub-projects, up to five levels deep, matching how you actually run jobs. Every level keeps its own invoices, budgets, P&L, and reports, with parent levels rolling up financials across the whole branch.

Bill Pay

Vendor Credits

See and apply vendor credits directly within Pay Bills. Available credits surface by vendor, you choose which credits to apply and how much, and the net payment recalculates in real time.
