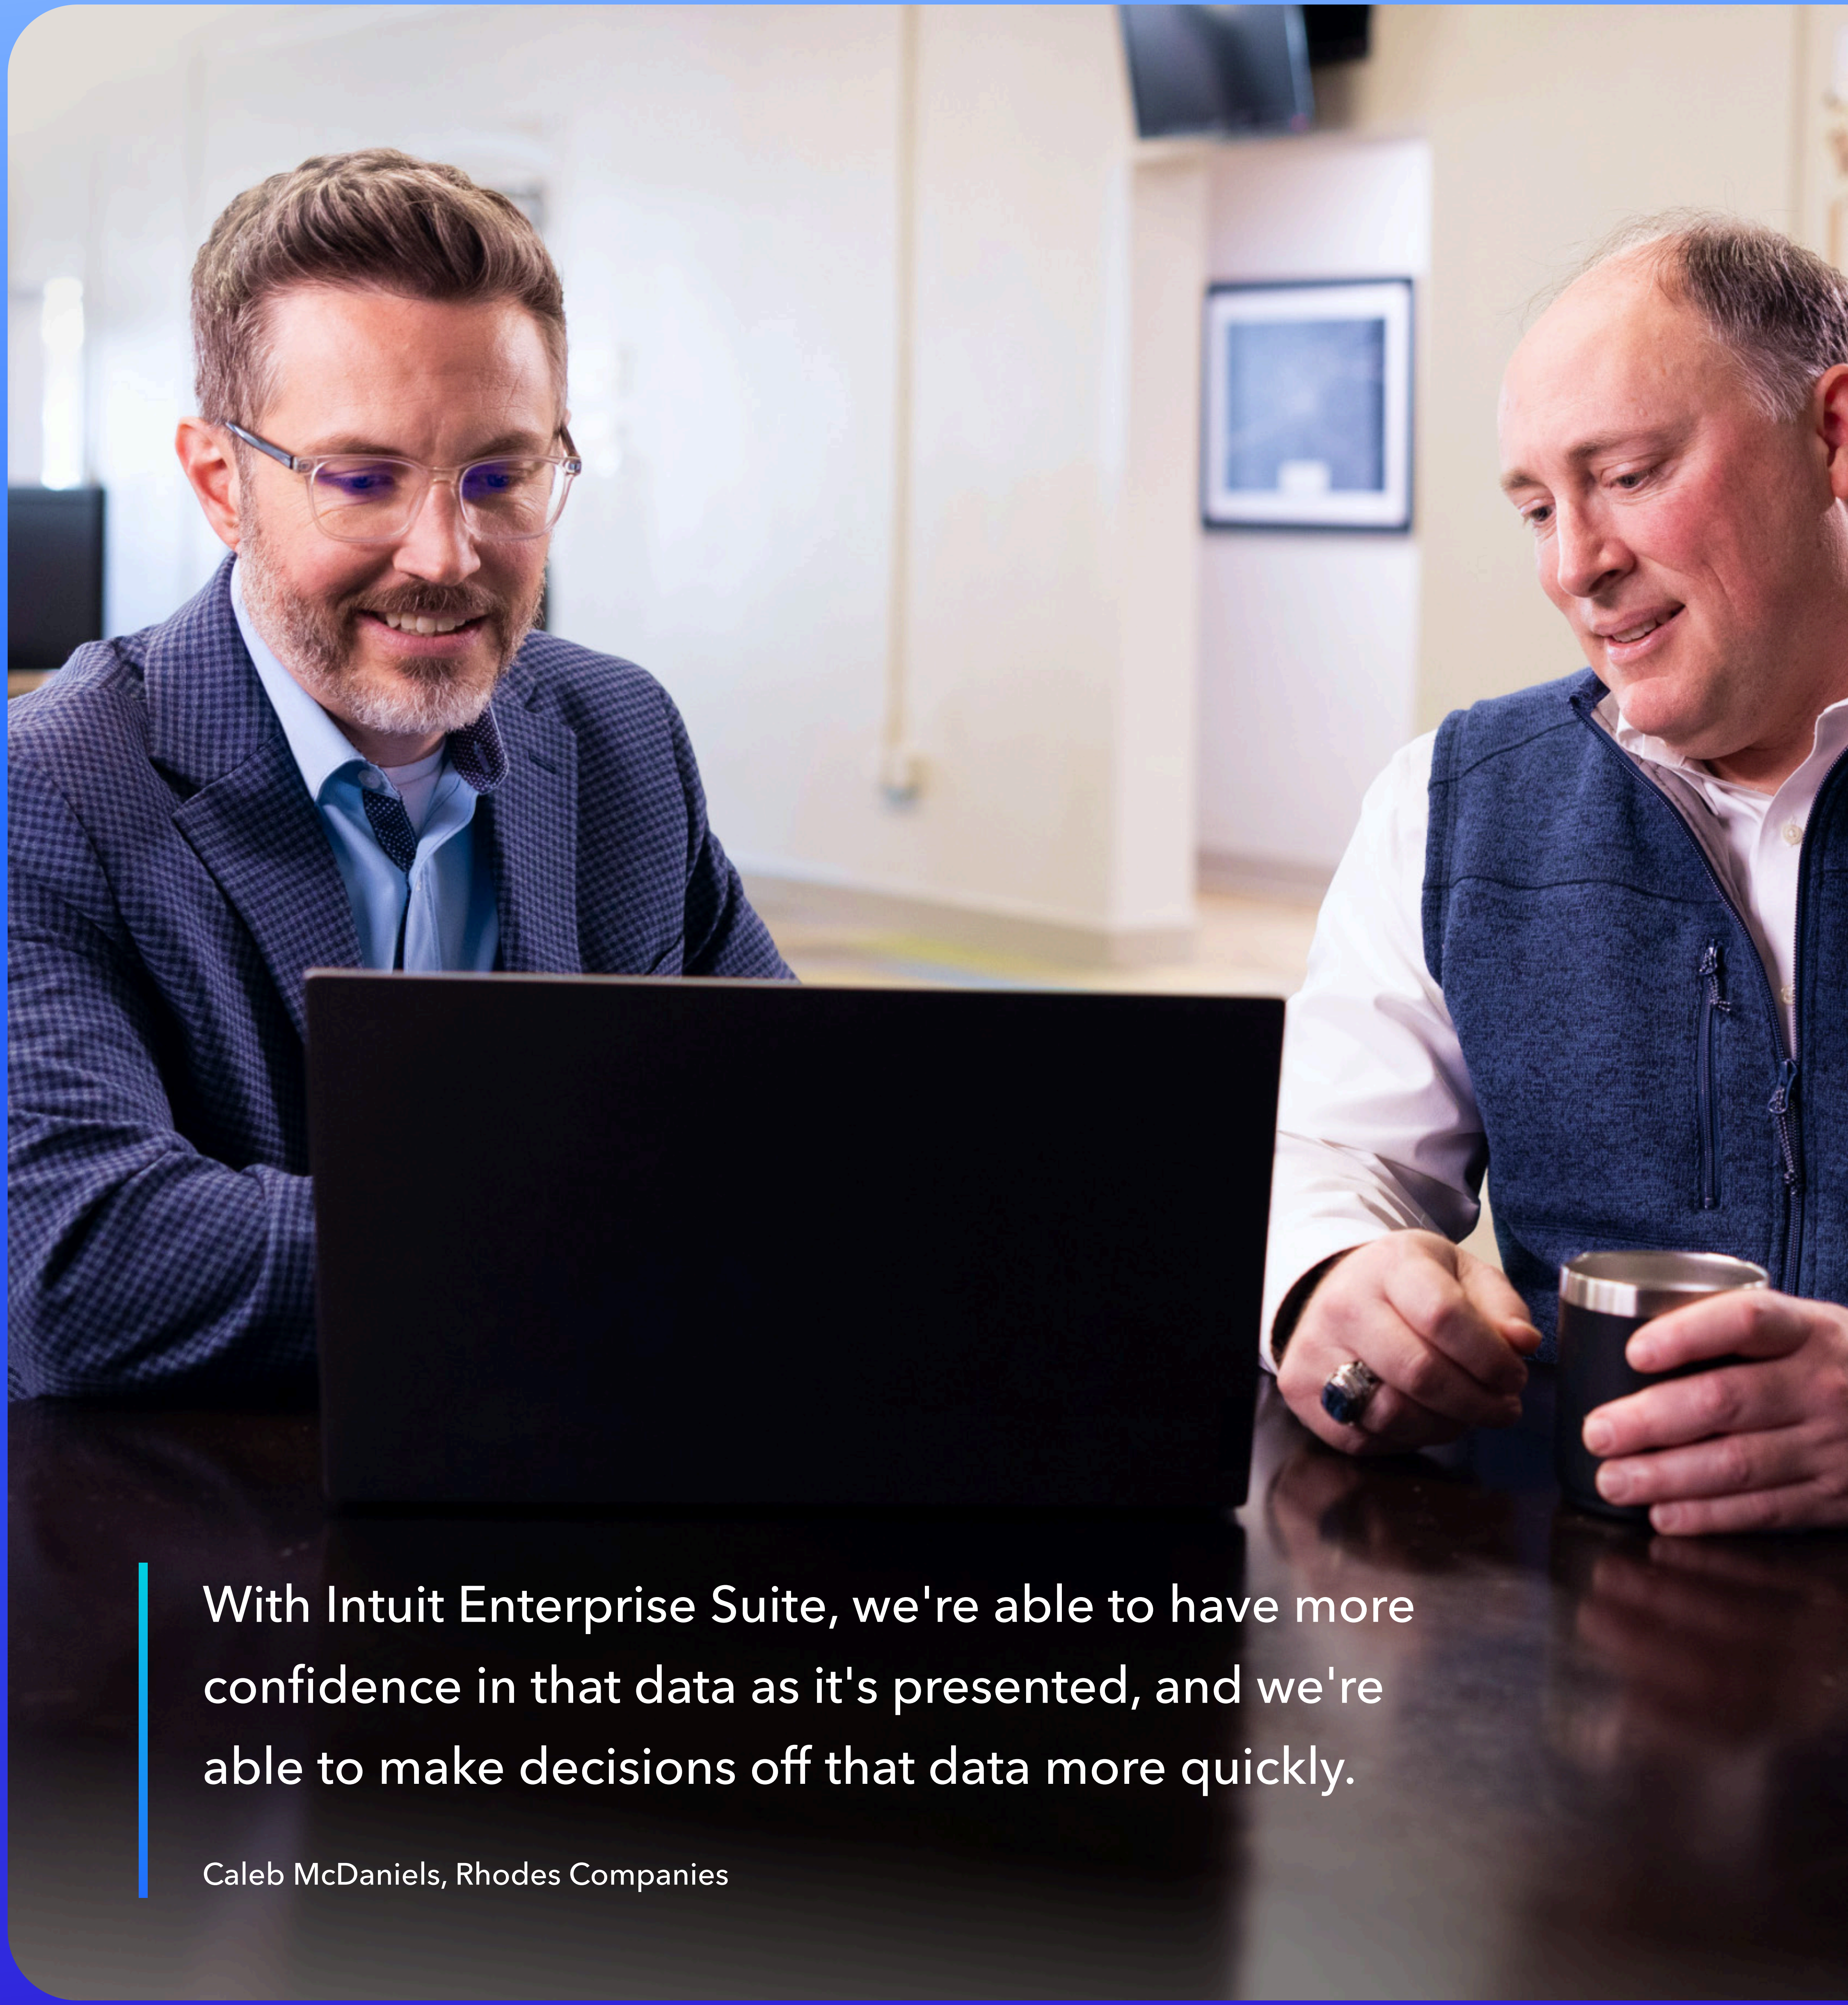
INTUIT
Enterprise Suite

Product release overview

Summer 2026



What's new in Intuit Enterprise Suite

The August release of Intuit Enterprise Suite is built on what you've told us it takes to run a complex business without the overhead of a legacy ERP. This release strengthens the platform across the board: enterprise-grade tools, AI-native intelligence, industry specific workflows, and built-in workforce solutions that keep more of your business running on one system.

These notes include beta features rolling out between August and October, so you can be the first to try out new capabilities. Join our Early Access Program to use these capabilities early and help shape where they go next.

Table of contents

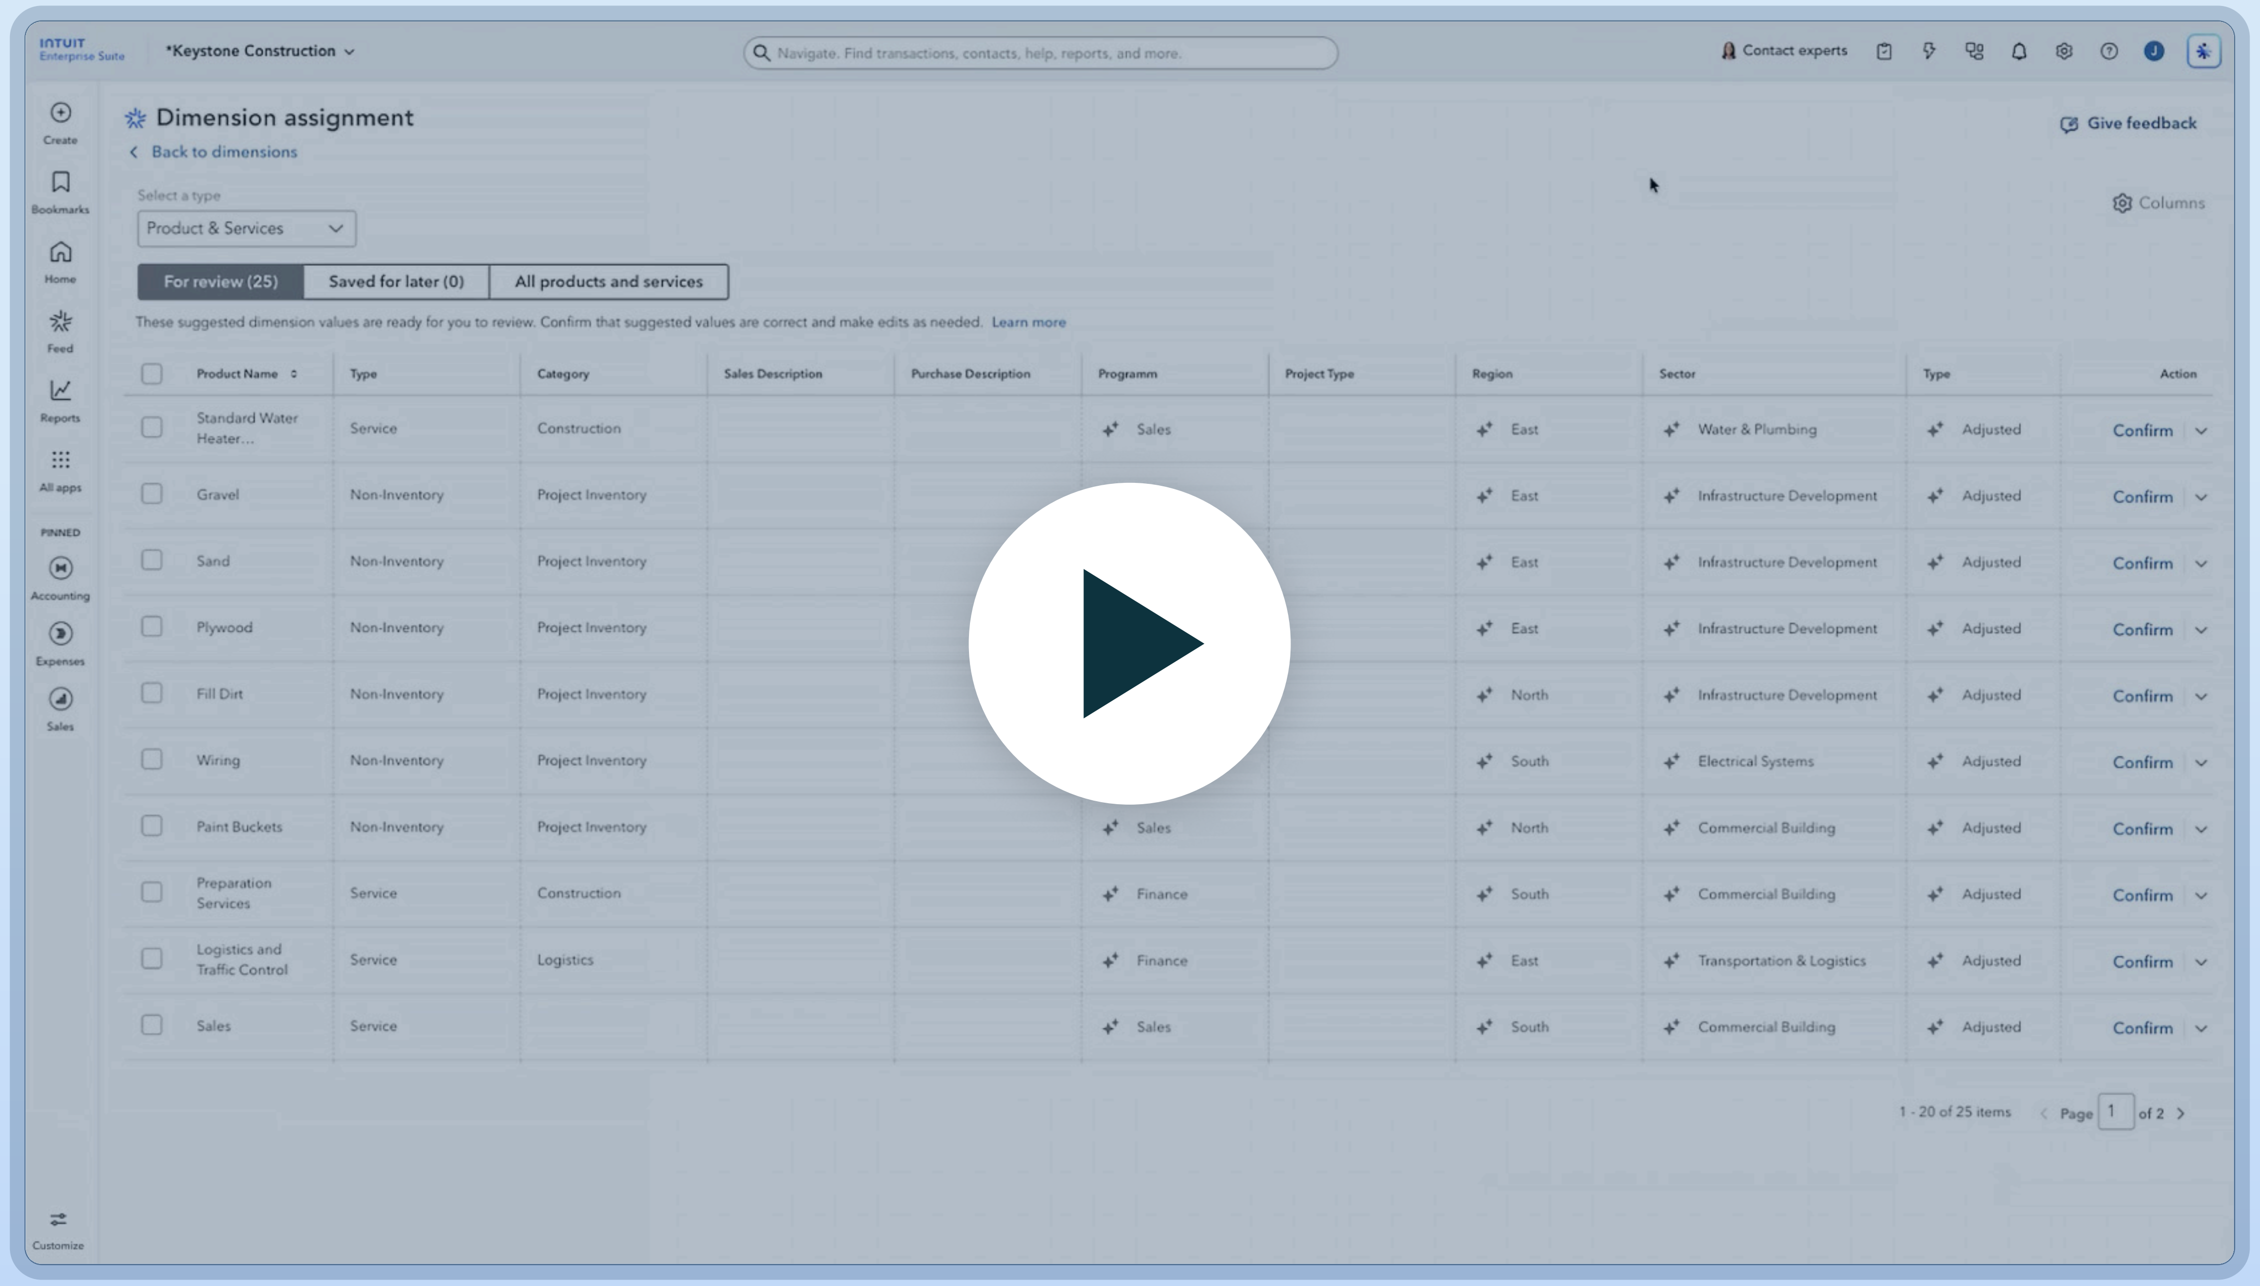
RELEASE HIGHLIGHT

Report the way your business operates

Dimensions give you the flexibility to tag your transactions with multiple attributes so your reporting matches your business.

RELEASE HIGHLIGHT

Report the way your business operates



Getting Started with Dimensions (4:25)

Dimensions overview

Every business is more than its totals. Underneath the top-line numbers are regions, departments, projects, and product lines—each one telling you something different about how things are really going.

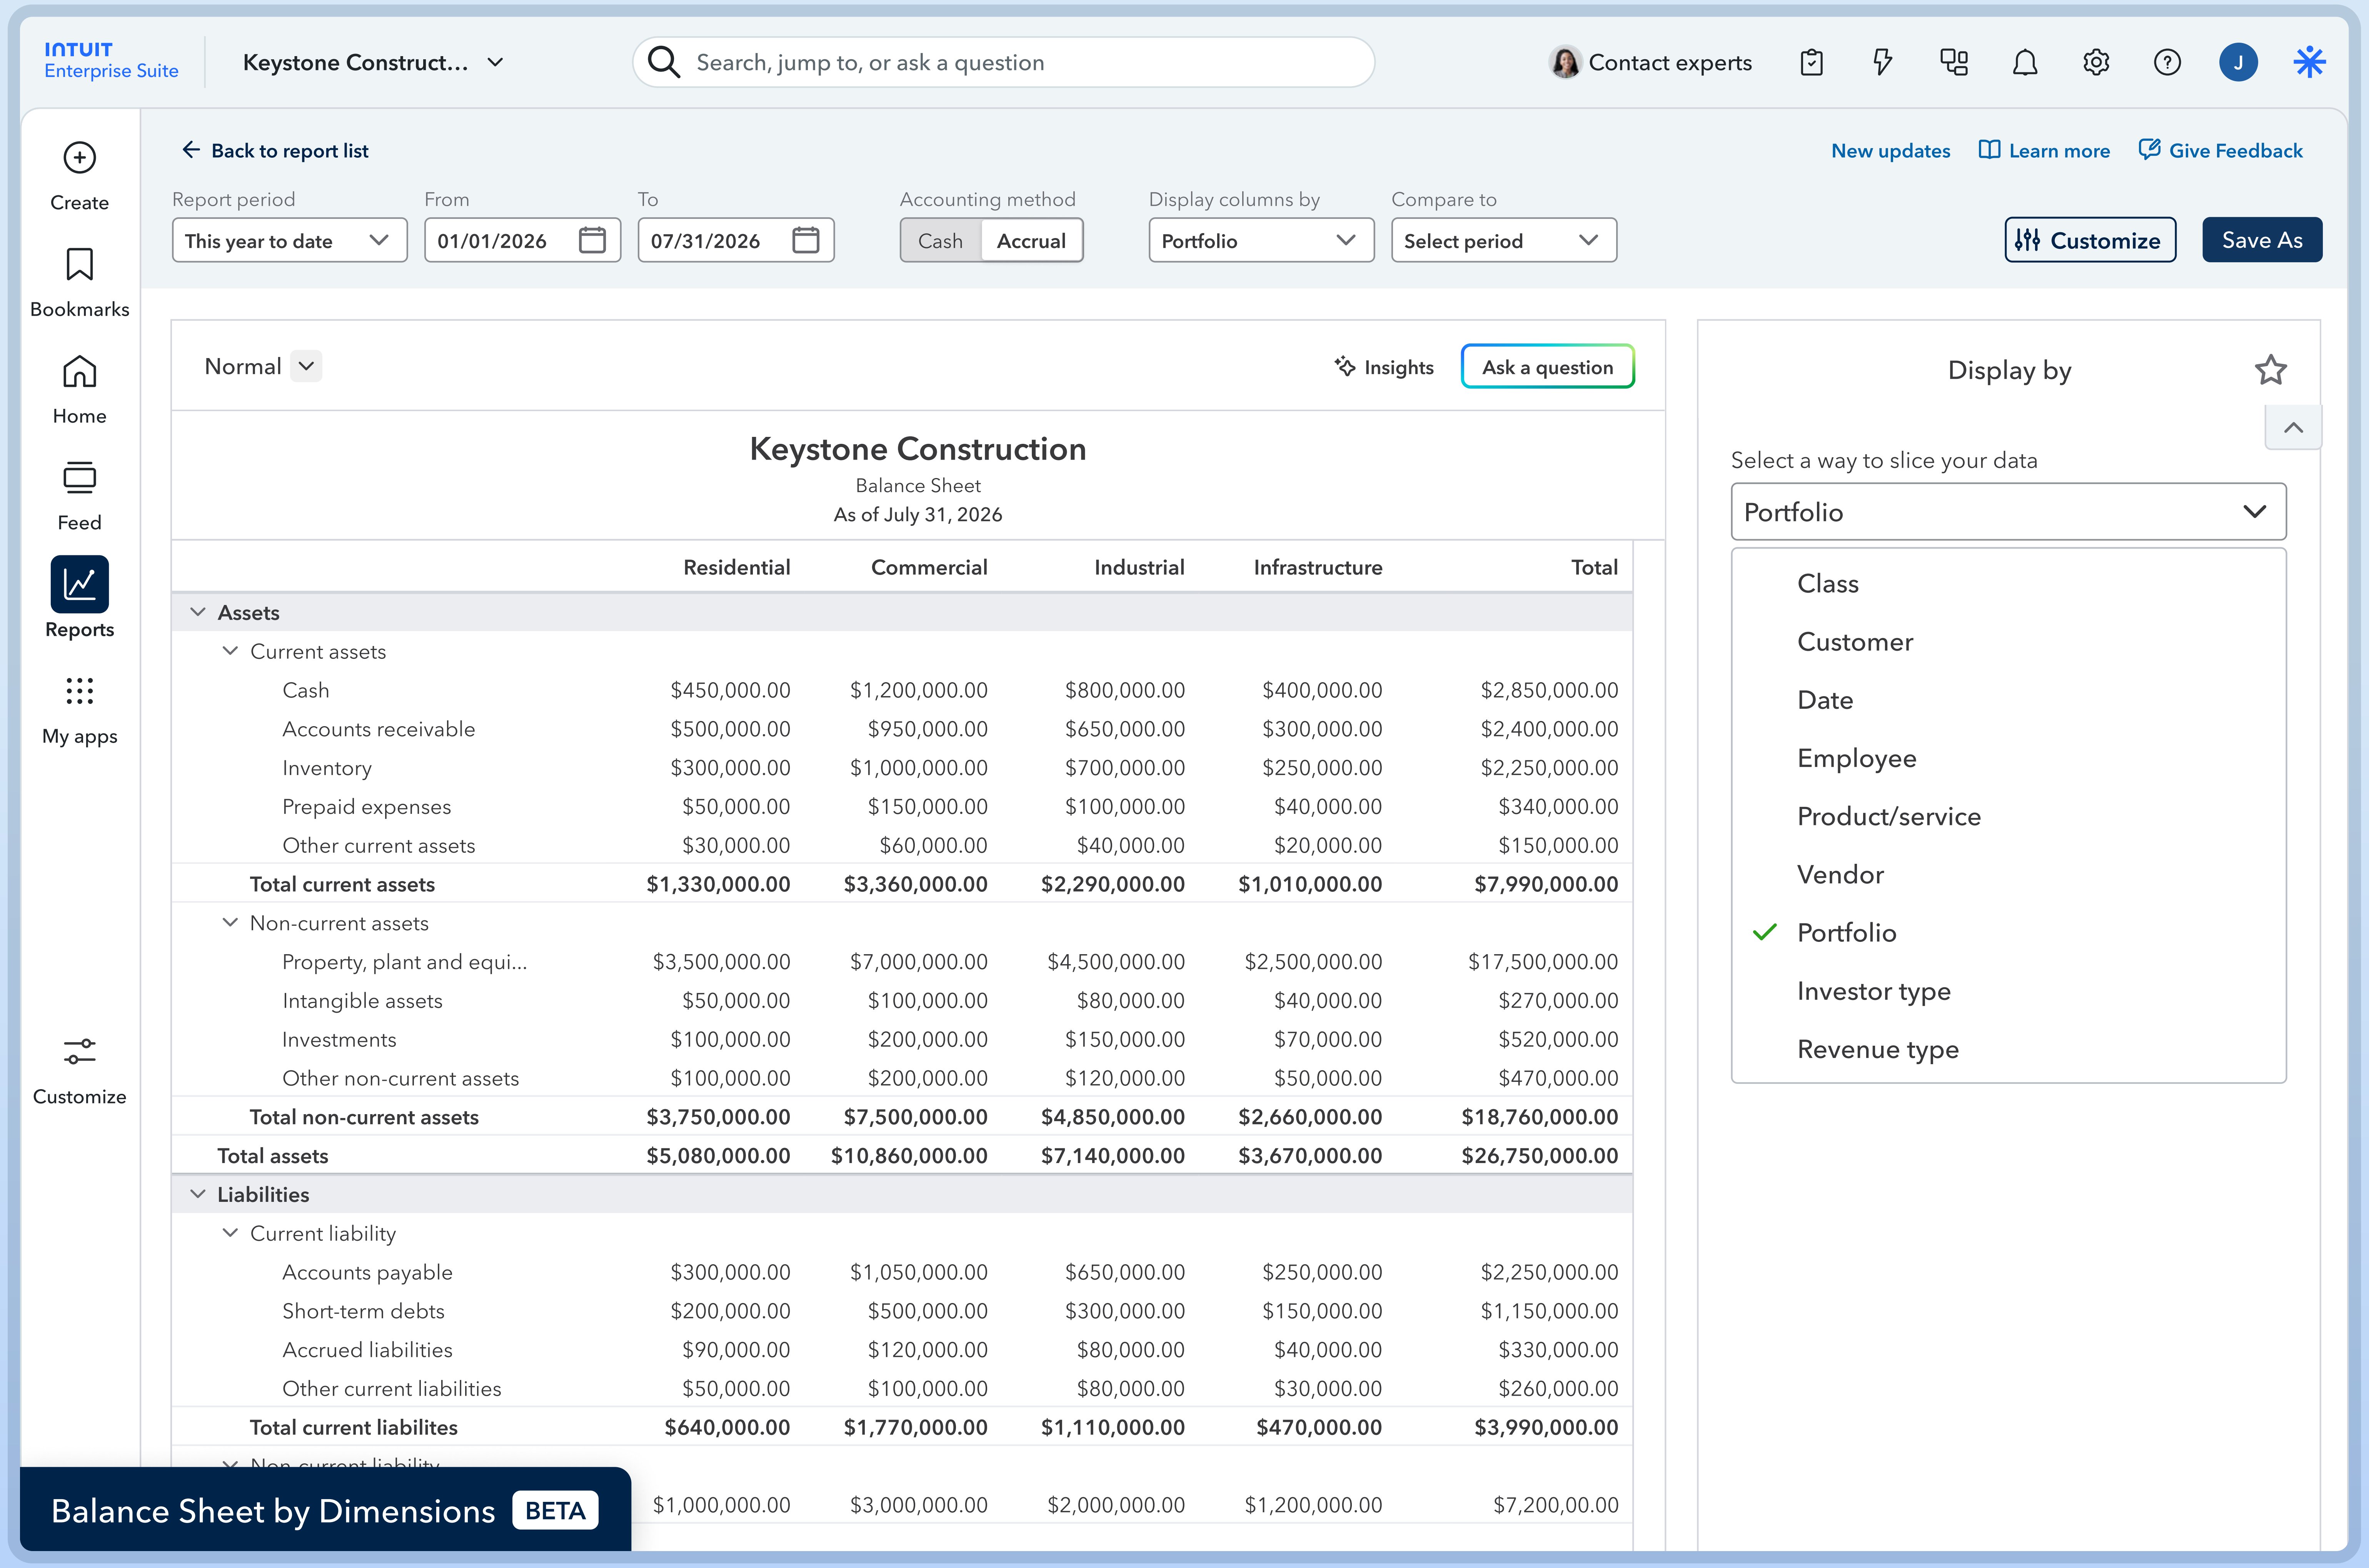
If you use classes today, dimensions will feel familiar. They function like classes without the limit of one-attribute per line. Where a class assigns a single attribute to a transaction, dimensions let you assign up to 20. And as of this release, dimensions work everywhere classes do across reports and transactions so you can make the move without friction. Updates include adding dimensions to Time, billable expenses, and recurring payment transactions; assigning dimensions at the header level of invoices; running balance sheet by dimension reports for single entity (beta); eight additional projects reports by dimension, including cost to complete and WIP; and allowing you to reparent dimensions as your reporting needs evolve.

> "The use of dimensions allows us to really bifurcate our reporting between location and type of activity. Prior to that, it was basically exporting to Excel and doing pivot tables and coming up with the best reporting that we could do."
>
> Brightline Painting

RELEASE HIGHLIGHT REPORT THE WAY YOUR BUSINESS OPERATES

Generate reports without workarounds

Dimensions transform financial reporting from a flat summary into a multidimensional view of your business, letting you slice your P&L, Balance Sheet, and more by any combination of department, region, project, cost center, or custom dimension you define. Instead of building parallel ledgers, bloated charts of accounts, or relying on complex workarounds to answer questions like, "What's our gross margin in the Southwest for our commercial accounts?"—dimensions make that a single, real-time report. And because dimensions power budgeting and forecasting, teams can set targets, track actuals, and identify variances at the specific level of granularity your business runs on.

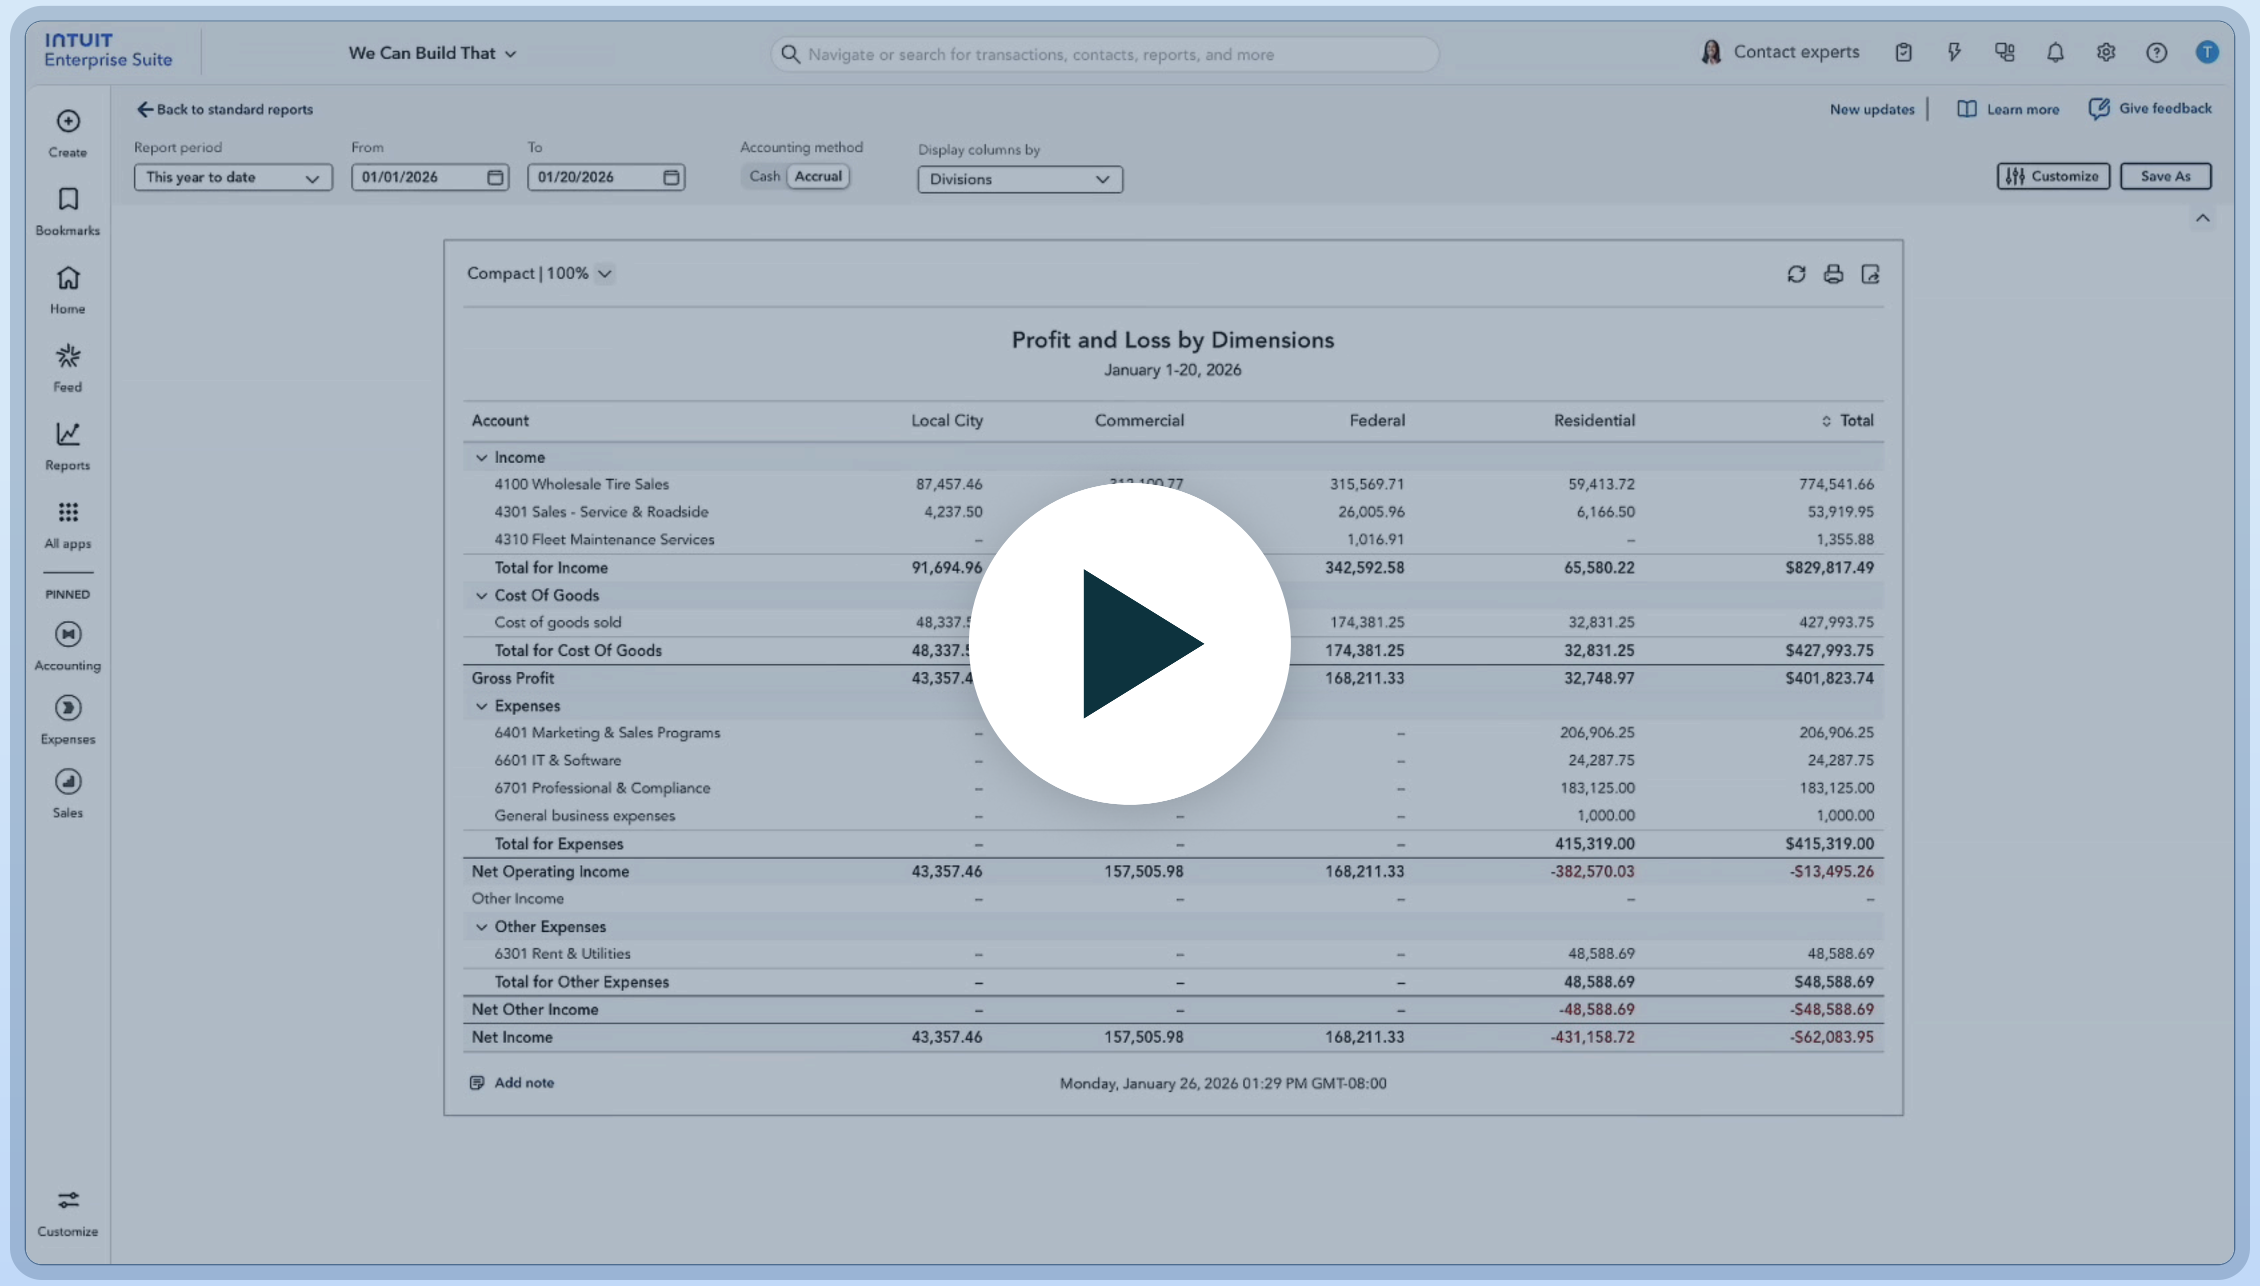


RELEASE HIGHLIGHT REPORT THE WAY YOUR BUSINESS OPERATES

Get started with dimensions

Find *Settings* in the top right corner of your dashboard. If you're working from a consolidated view, select *Dimensions* under *Shared Lists*. If you're viewing a single entity, select *Lists*. Intuit Enterprise Suite includes 4 custom dimensions and additional dimensions can be purchased by reaching out to your account manager.

To get started, create custom dimensions for region, department, location, or sales channel. You can also use them for industry-required views including donor type or program for non-profits, job type such as residential and commercial for construction, and many more. See the demo for an overview of how to set up and use dimensions.



Using Dimensions for Deeper Reporting (3:18)

"With Intuit Enterprise Suite, [dimensions] allow us to drill down. Ownership can see a better snapshot of how the company in total is doing, providing the visibility needed to see truly profitable primary business lines versus R&D expenditures."

Brandon Webster, PULSEROLLER

RELEASE HIGHLIGHT

Close faster across every entity

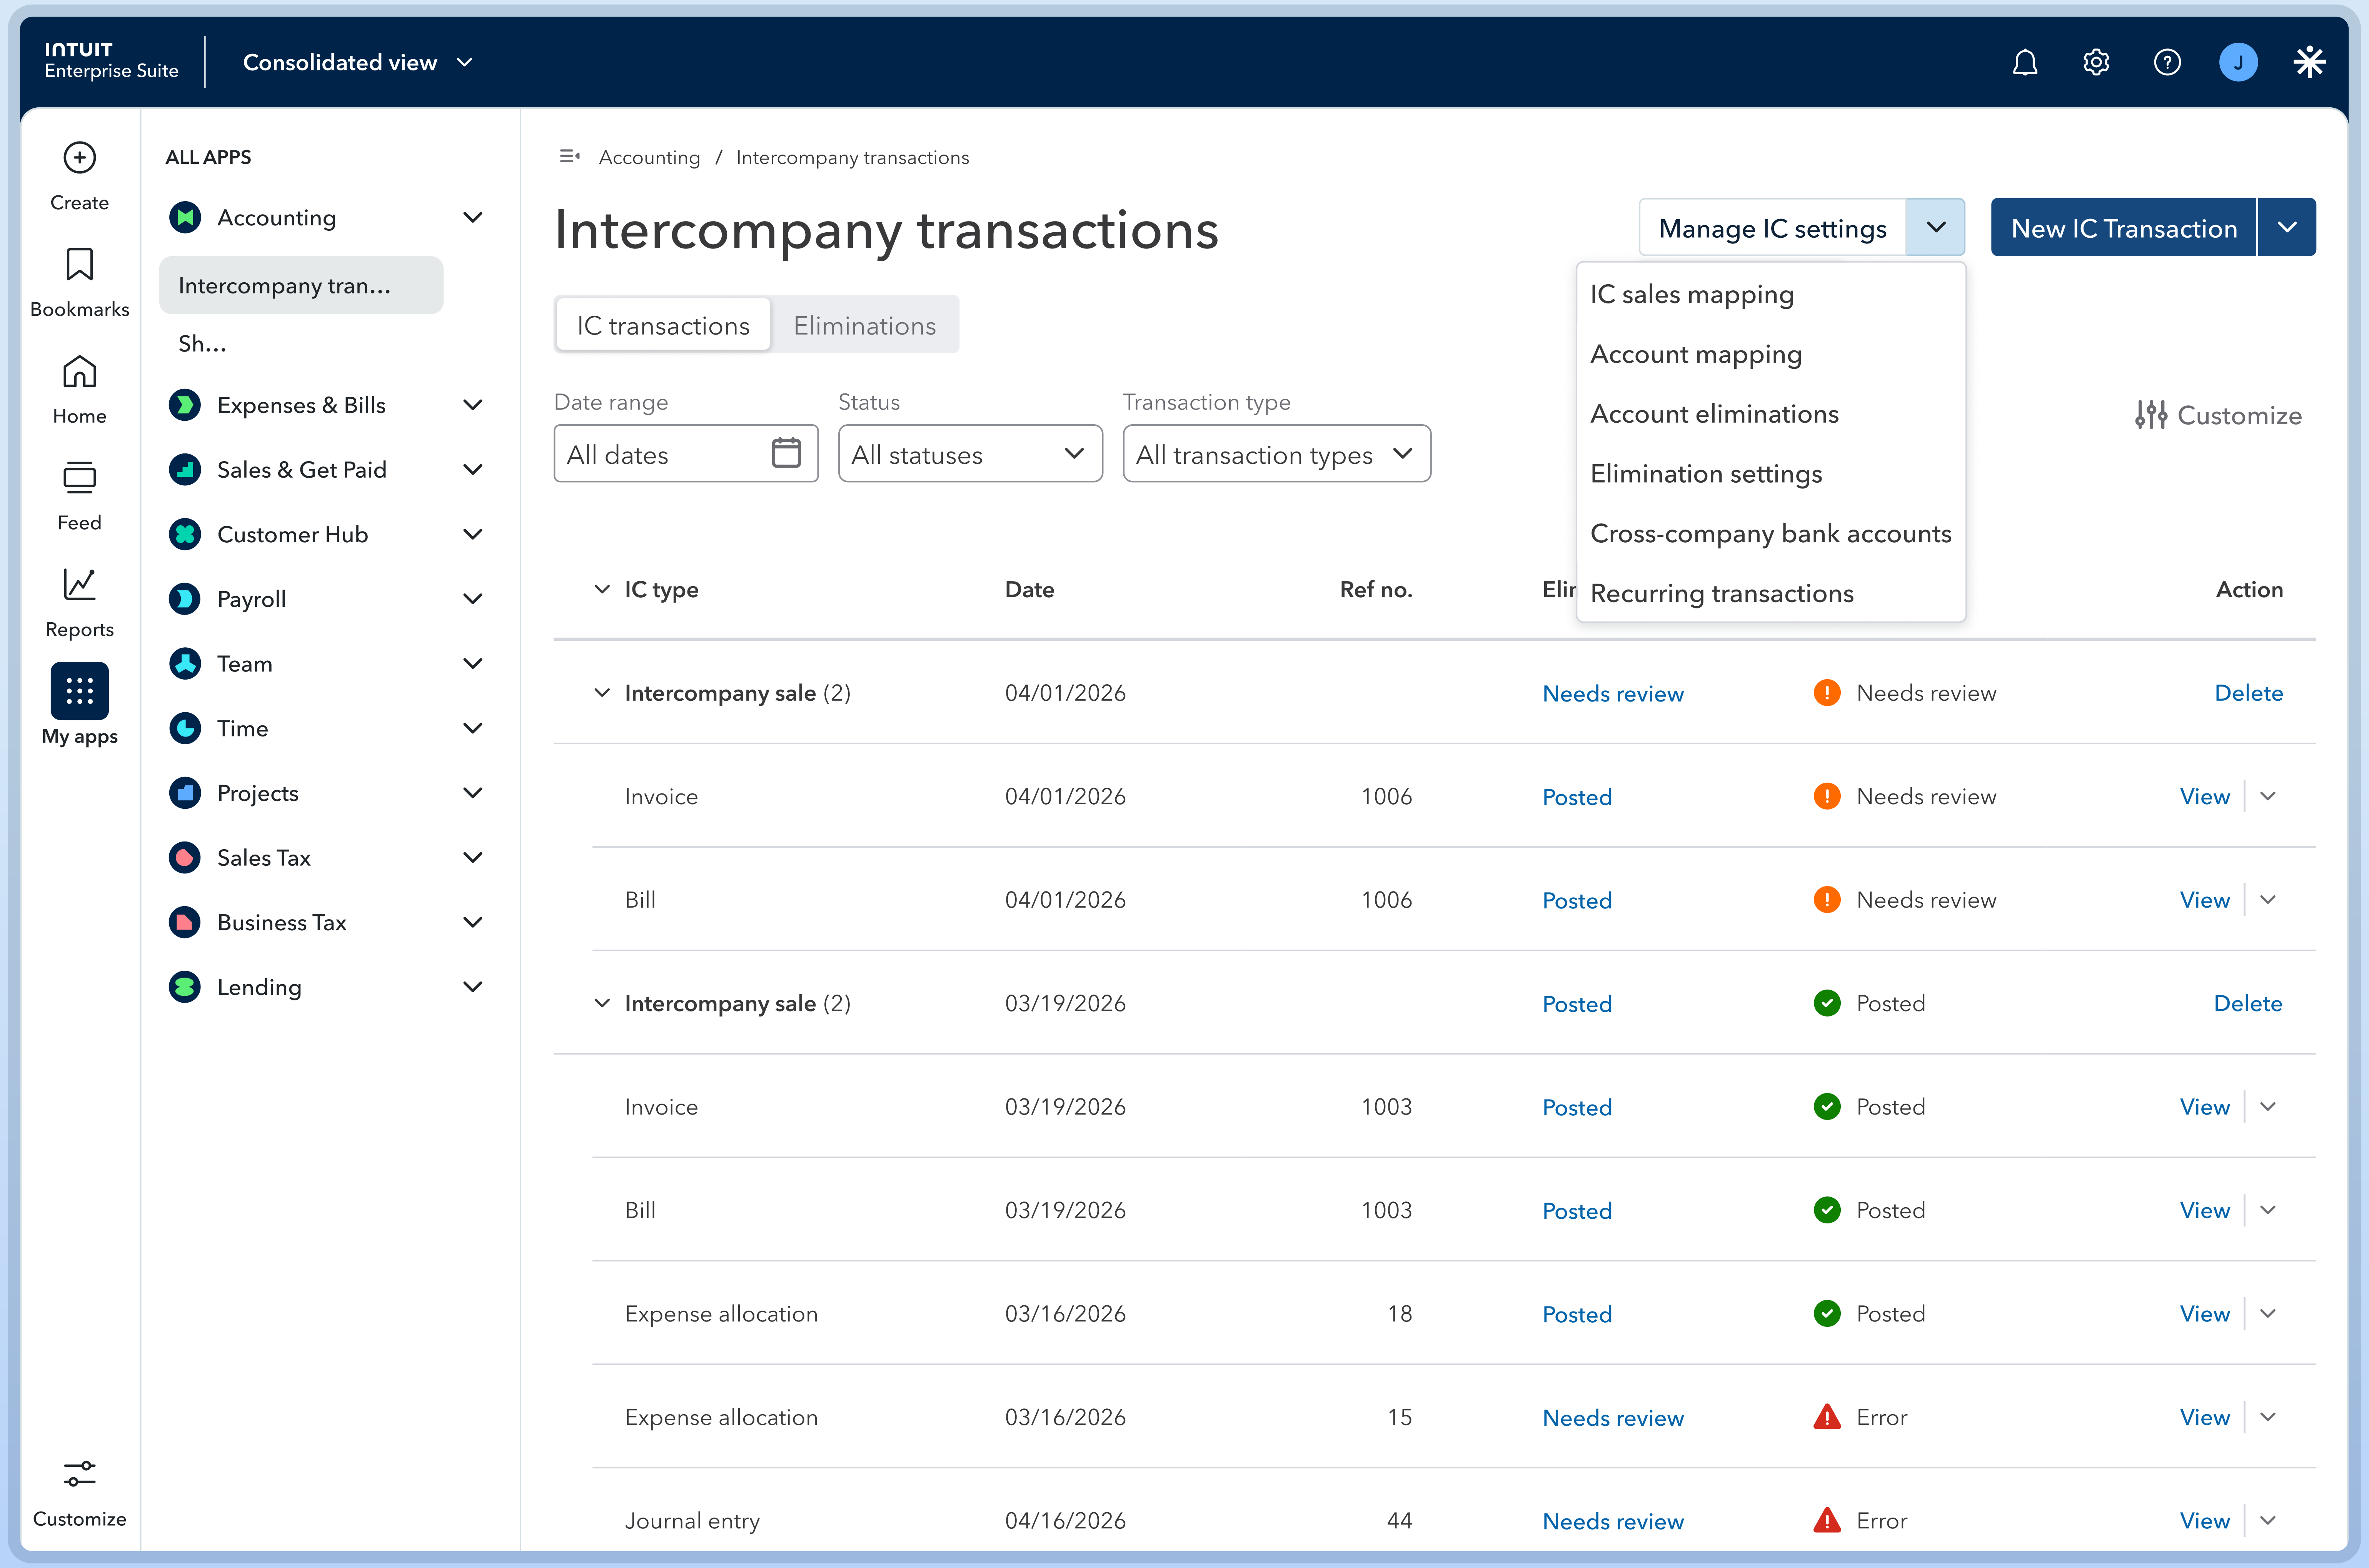
With this release, Intuit Enterprise Suite takes on more of the heavy lifting in your multi-entity accounting with automation that gives you new levels of efficiency.

RELEASE HIGHLIGHT

Close faster across every entity

Intercompany Automation

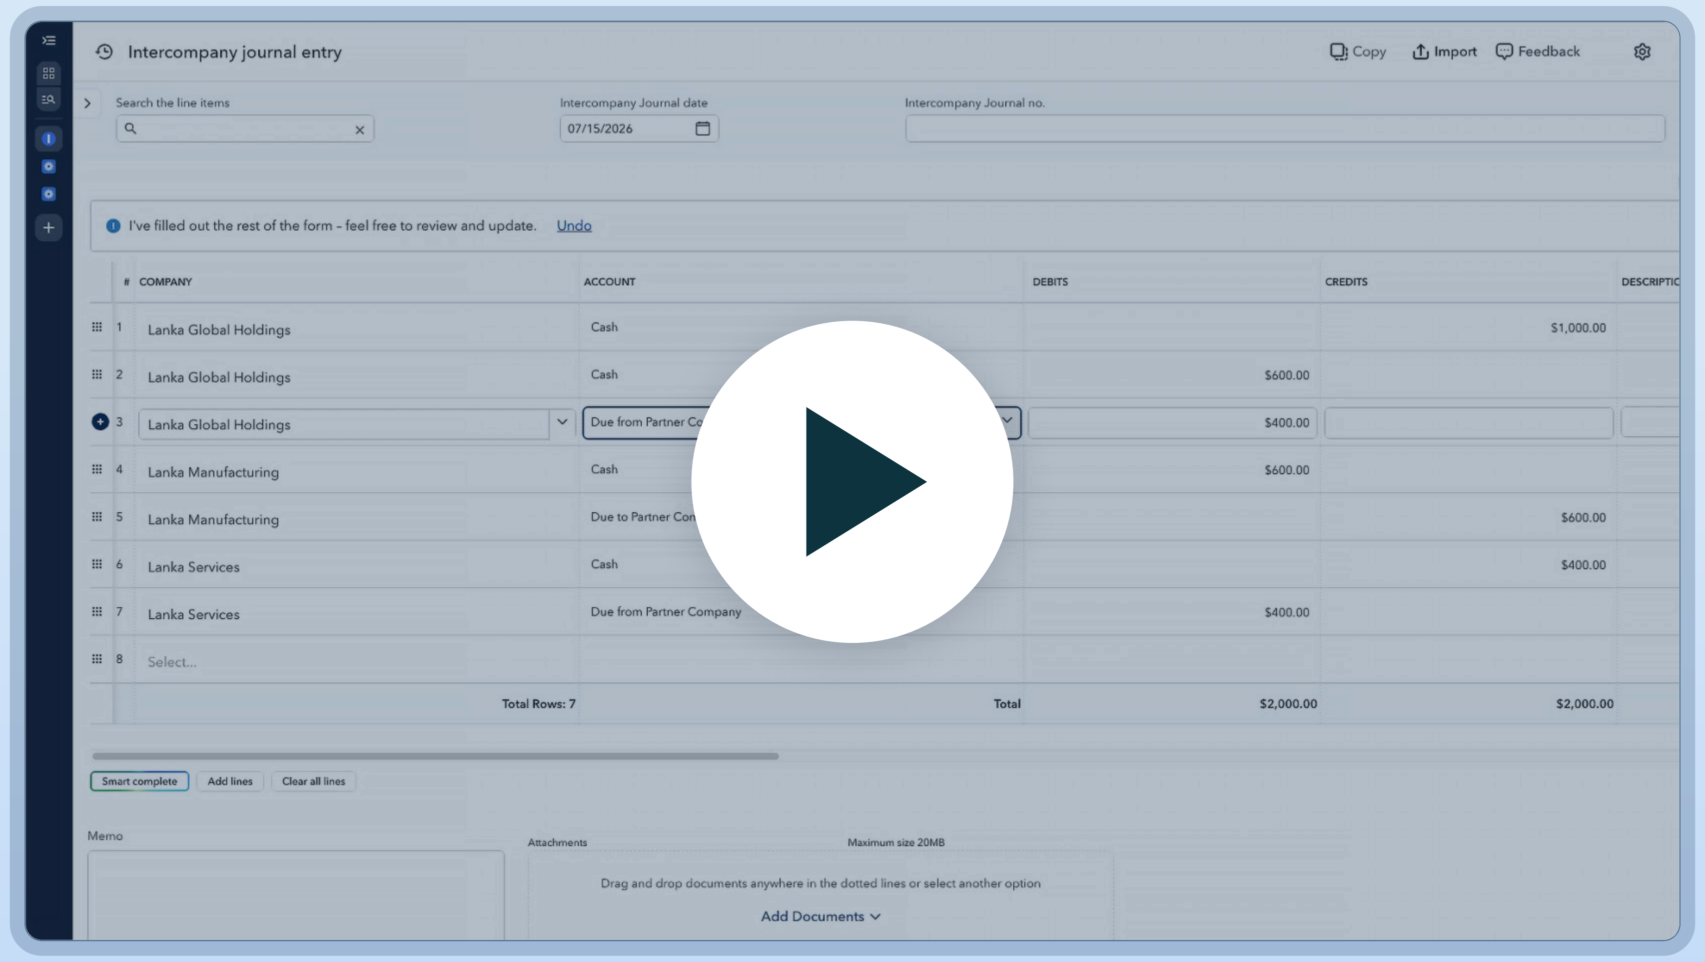
Last spring, intercompany eliminations moved from eliminating entire account balances at reporting time to creating them in real-time at the transaction level, strengthening traceability and laying the foundation for a more continuous close. This release takes that further. Intuit Enterprise Suite now completes and balances intercompany journal entries for you, posts mapped intercompany bills automatically, and turns the transactions that repeat every period into reusable templates—taking on complex, manual work through AI that learns from your past entries to recommend what comes next. You stay in control throughout: the platform surfaces recommendations rather than acting on its own, and automates only when you choose to turn it on, as it already does with intercompany eliminations.



RELEASE HIGHLIGHT CLOSE FASTER ACROSS EVERY ENTITY

Intercompany Journal Entry Smart Complete

Creating intercompany journal entries is complex and time-consuming—manually balancing entries, determining the right due to and due from accounts, and selecting entities, all with room for error. Smart Complete does it for you: based on the lines you enter, Intuit Enterprise Suite detects the transaction type and generates the required due to and due from entries, intercompany contacts, and partner company. You enter the business intent; the platform handles the accounting structure—so entries balance accurately and consistently across entities.



Smart Complete & Recurring Templates for Intercompany Entries in Intuit Enterprise Suite (2:58)

Recurring templates

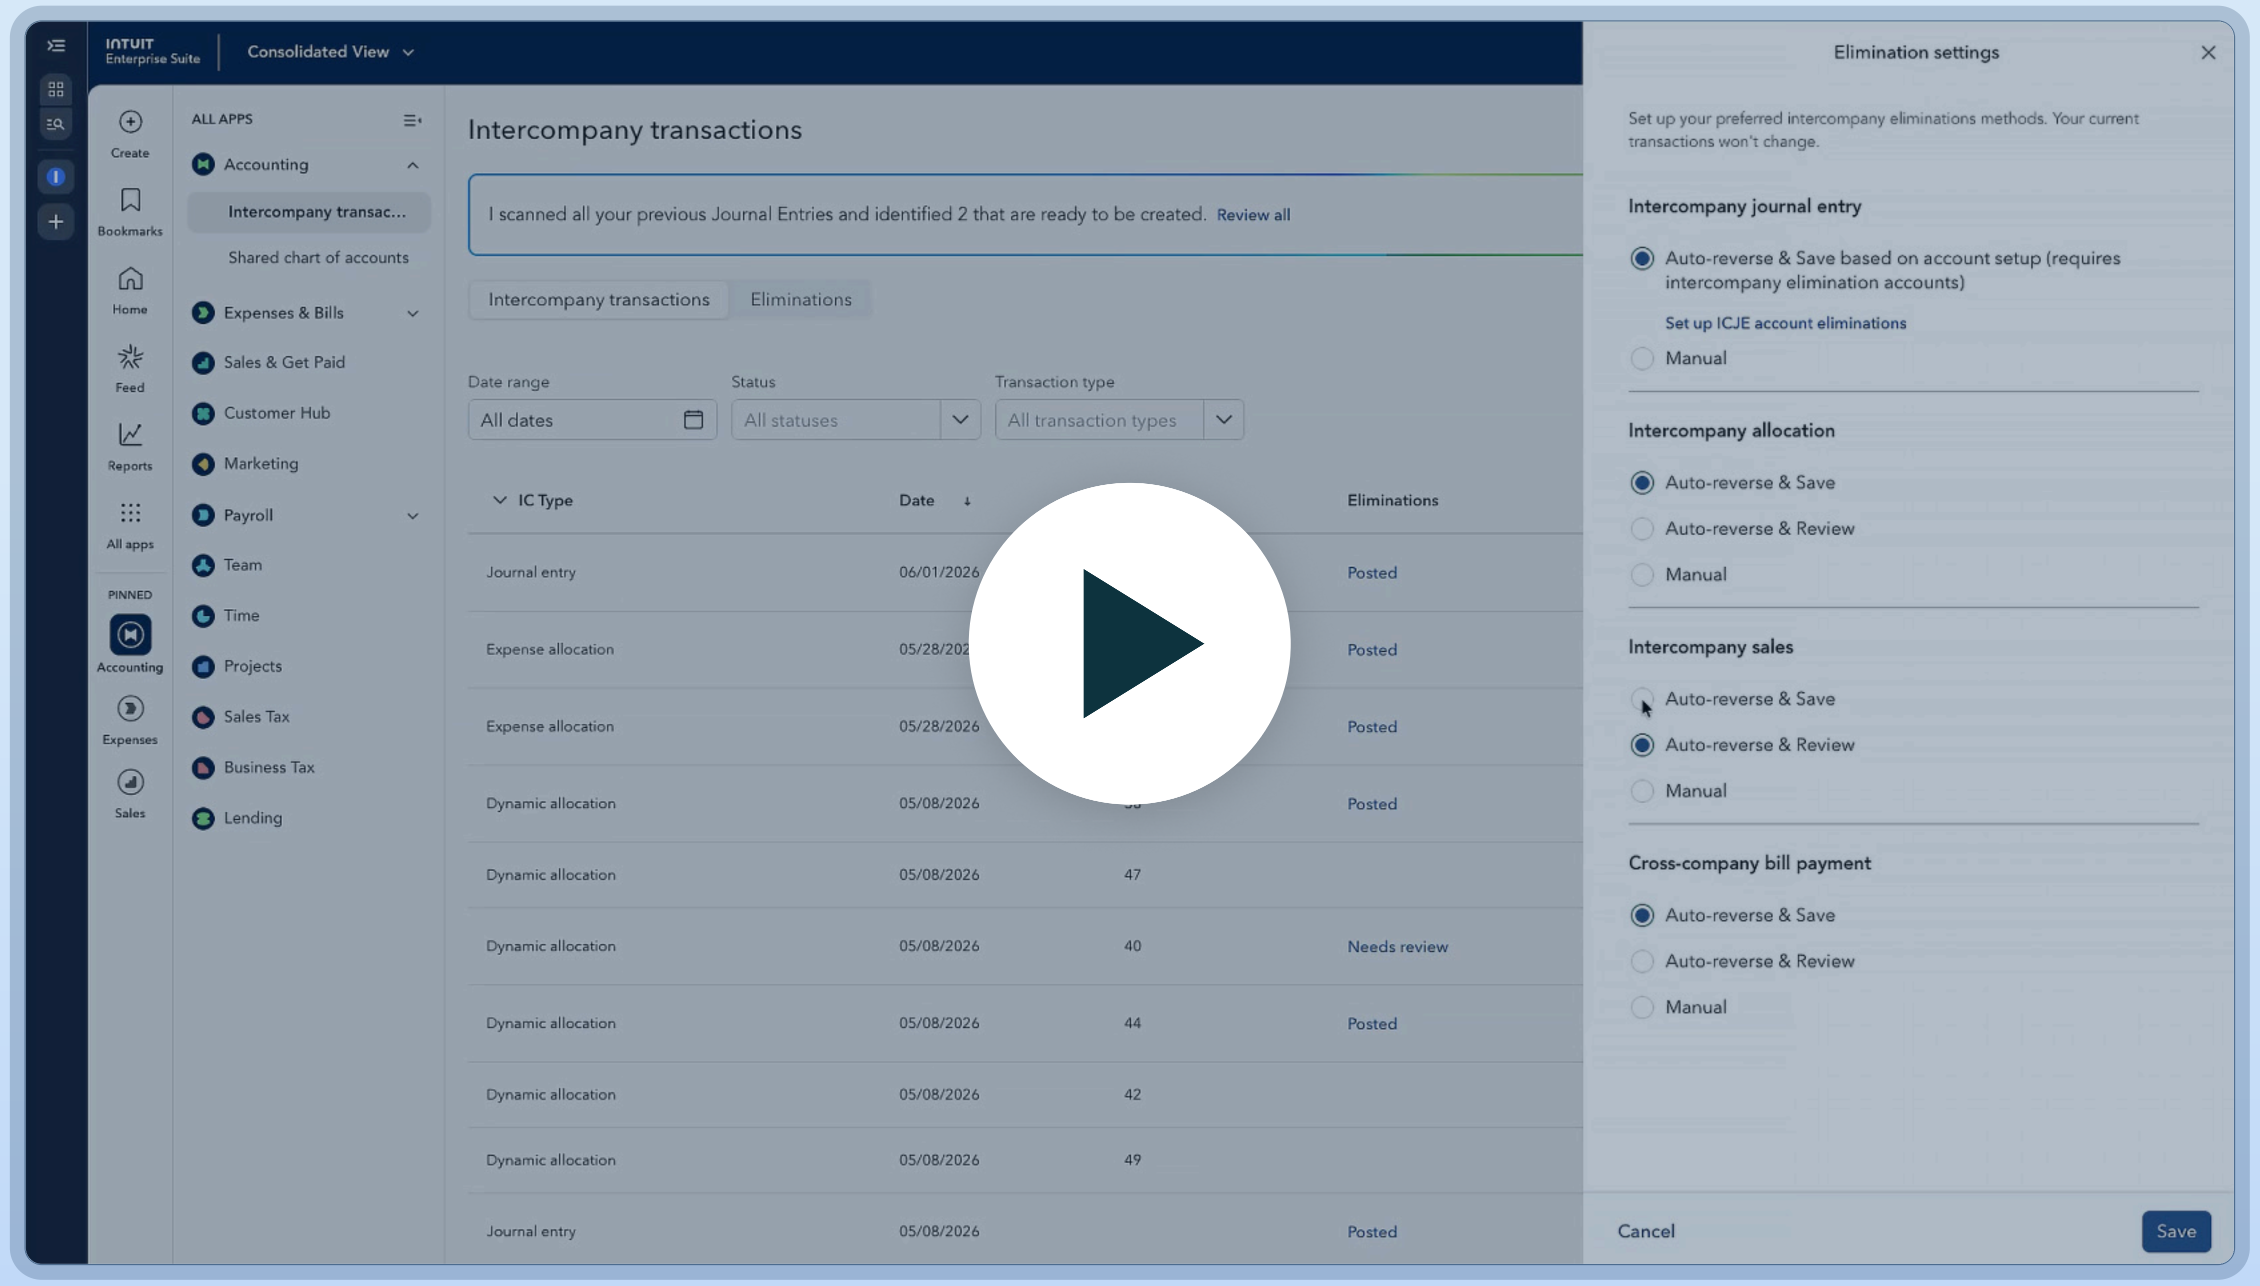
The intercompany transactions that repeat every period shouldn't need to be rebuilt every period. Now generally available, recurring templates let you turn intercompany journal entries and dynamic allocations into reusable templates and schedule them to run automatically each period—so the same work doesn't land on your team's plate again and again.

> The multi-entity journal entry functionality was an immediate cost saver off the bat. The time savings for the rest of the accounting staff was big right there. Everything else on top of that was icing on the cake.
>
> Keaton Trager, EV Capital LLC

> We're saving at least 10 to 15 hours a month per account manager thanks to multi-entity automation. That efficiency is what allows us to scale.
>
> Ryan Handel, FIXE

RELEASE HIGHLIGHT CLOSE FASTER ACROSS EVERY ENTITY

Auto-post with custom mappings



Auto-Post Intercompany Bills with AI Mappings in Intuit Enterprise Suite (2:57)

Today, every intercompany bill moves through a draft-and-accept step, even when the categorization never changes. Now you can define a mapping that ties a selling company, a product or service, and a buying company to a category. When a mapping is active and auto-post is on, matching bills skip the manual review and post automatically—accurately and predictably, with less hands-on work. You can review AI-suggested mappings based on your past transactions and approve the ones you want to use.

> **90% reduction in intercompany month-end reconciliation time during peak season.**
>
> Lallier Construction

More updates

Intuit Enterprise Suite continues to raise the bar on what it means to be an enterprise-grade ERP without the enterprise downsides. In this section, you will see the many enhancements we are delivering as part of the August release to ensure our AI-native platform continues to give you powerful multi-entity functionality, improved depth in project financials and inventory capabilities, and enhanced reporting.

This section highlights new features that are available to all Intuit Enterprise Suite customers, as well as beta features for Early Access program participants. Intuit Enterprise Suite's Early Access program lets users try new capabilities before they're widely available, help shape their direction with their feedback, and get a head start on the workflow improvements they bring.

Join the Early Access program here.

BETA Features available to Early Access program participants.

Multi-entity

This release brings more enhancements to make your cross-entity operations more efficient and bring a new multi-currency solution to the platform.

Cross-company Bill Payment

Cross-company Bill Payment allows businesses to record a bill payment in one entity using a bank account from another, and automatically handles the intercompany accounting.

Multi-level Entity Hierarchies BETA

Multi-level Entity Hierarchies launched last Spring now extend beyond just consolidated reporting. With this update, your pre-defined entity hierarchies now carry through to your KPIs and dashboards for more convenient access to your top metrics right where you get work done.

Multi-currency BETA

Multi-currency is taking a big step forward with enhanced rate management with exchange rates now managed in a single, protected table; clearer exchange rate impacts on transactions; and reports that apply exchange rates automatically as of the report end date with automatically calculated unrealized gains and losses.**

**Disclaimer: Available today for U.S.-dollar functional currency organizations; international functional currencies arriving this fall.

Projects

For project-based businesses, you now have access to better reporting and permission controls.

New Project Reports

New Project Reports help you manage your project profitability with more confidence. New reports include: Open Purchase Orders by Project, and Project Costs by Vendor and Project Detail.

Projects

Projects have been updated to reflect your feedback. You can now apply Dimension value filtering on project reports and see project associations directly on Project Transaction pages. Ship-to addresses on purchase orders now automatically default to the project site address, and you can split payroll by project.

Project-specific user permissions BETA

Project-specific user permissions allow businesses to restrict Project Manager users in Intuit Enterprise Suite to only their assigned projects. For businesses with multiple project managers and projects, AI suggests project assignments to reduce manual effort.

Inventory

For businesses operating with inventory needs, Intuit Enterprise Suite continues to deepen its inventory and manufacturing depth.

Units of Measure

Units of Measure allow businesses to order, receive, and sell goods in the quantities that make sense at each stage, such as crates, packs, or individual items.

Invoices with multiple shipping addresses

Invoices with multiple shipping addresses enables users to add multiple addresses per customer and then select one from a drop-down on an invoice, eliminating the need to manually key in additional addresses for customers with multiple locations.

AI

Intuit Intelligence was designed to make finance teams more efficient while keeping users in the loop for total confidence. The beta features coming make AI in Intuit Intelligence easier to use with a new chat interface and improve the onboarding experience.

Intuit Intelligence chat BETA

Intuit Intelligence chat has been iterated and enhanced. Now coming to Intuit Enterprise Suite, it allows users to ask questions and generate prompts in natural language to get insights and take actions across entities.

Dimensions back fill enhancements BETA

Dimensions back fill enhancements now let customers upgrading from QuickBooks Online or QuickBooks Desktop to migrate from Locations or Custom Fields to Dimensions. Intuit Intelligence will suggest options from prior transactions and then reclassify those transactions with Dimensions.

Chart of Accounts (CoA) standardization BETA

Chart of Accounts (CoA) standardization enhancements now allow customers to select standard CoAs for subsets of entities instead of applying them to all entities. Additionally, Intuit Enterprise Suite now offers industry-specific CoAs.

Business Intelligence

Business Intelligence capabilities are getting more powerful with additional filters, drill downs, and report customizations so your business can access the insights it needs—no spreadsheets needed.

KPI scorecard

The KPI scorecard has been enhanced with Class and Dimension filters, the ability to drill down into any KPI, and additional usability improvements.

Management reports in consolidated view

Management reports in consolidated view now offer AI-generated executive summaries and smart chips so metrics and time periods update automatically when you create new management reports or update underlying data.

Multi-level grouping

Multi-level grouping offers deeper report customization by allowing you to include up to 6 different dimensions in nested rows and then drag and drop to reorder, add subtotals, and expand or collapse groupings.

Multi-dimension 'display by' reports BETA

Support up to 3 nested 'Display By' dimensions (Month, Class, Location, Dimension, and more), with collapsible column groups and a pinned total column.

Multi-dimensional Pivots BETA

Multi-dimensional Pivots are available on eligible detail reports, allowing you to group rows and columns by multiple dimensions at the same time for deeper analysis without needing to export to spreadsheets.

Single sign-on

Single sign-on is a new functionality that allows businesses to use their existing corporate identity tool (Google, Okta, or EntraID) to provision Intuit Enterprise Suite users and manage their account access. Plus, the system automatically revokes user access when they leave your company.

Workforce Solutions

Reporting across Payroll and Time is now richer with custom reports and dimensions.

Dimensions Integration with Time and Payroll BETA

Dimensions Integration with Time and Payroll enables payroll admins to review, edit, and split paychecks across multiple dimension values for more complete reporting.

Custom Report Builder for Payroll BETA

Custom Report Builder for Payroll allows you to tailor and save reports with the employee and paycheck details that matter most to your business.
